

Structure

Information architecture:

The structure of the site is a Tree Structure using a horizontal navigation bar the whole width of the top of the page.

Interaction Design:

- The Süssse icon will bring users back to the top of the page and to the main Süssse logo section.
- Each navigation item has the same colour change when hovered over to confirm that clicking that item will direct the user to a desired location
 - On mobile devices a hamburger icon will be used.
- Clicking the play bubbles on both the video and music players will allow the chosen section to play.

- The contact me section will have a button that highlights grey when hovered over to show it can be used. Once clicked will bring up a form to be filled in by the customer.
- It will ask for name, email address, contact number and any additional information.

- The social links in the footer at the bottom have a highlighted effect when hovered over to ensure the customer knows they have a function and will open the desired social media page in a new window.
